KÜS DATA GmbH

Flexible working hours and greater appeal as an employer

KÜS expands its time management with personnel scheduling and mobile time recording

The federal office of KÜS (Kraftfahrzeugüberwachungsorganisation freiberuflicher Kfz-Sachverständiger e.V.) has been an Interflex customer for more than 20 years. The collaboration began with access control solutions and has been consistently expanded over the years to include time management and personnel scheduling. Since 2025, it has also included the native TeamTime app for mobile time tracking.

For KÜS DATA GmbH, this was a logical next step. As a full-service supplier focused on vehicle and road safety, the organization encourages personal responsibility for working hours at its federal headquarters in Losheim am See, where around 260 people are employed. Key priorities include more flexible working hours, transparent processes, and employee engagement – all with the goal of enhancing the company's appeal as an employer in the long term. The modern IF-6040 software solution makes this possible and streamlines administrative tasks.

Access control and time management in one system

KÜS relies on a range of Interflex hardware and software solutions across all divisions, including time management, personnel scheduling, and online and offline access control. Interflex's IF-6040 software system serves as the central platform. Employee access authorizations and connected IF-800 terminals are managed centrally within the application.

Sector:

IT, Corporate services

Number of Employees:

260 employees

Solution:

- Access Control (Hardware & Software)
- Time Management
- Personnel Scheduling

Products used:

- IF-6040
- IF-800 Terminal
- IF-5735 Terminal
- TeamTime App

Working hours recorded at the IF-5735 terminals are transmitted directly to the software. To efficiently manage its vehicle fleet, KÜS also uses the Driver's License Verification module.

Employees at KÜS particularly appreciate the simple, centralized control of multiple processes. KÜS DATA is a sophisticated IT service provider within the KÜS group of companies, supporting numerous customers from industry and commerce with its own data center. It is also responsible for the entire IT infrastructure of the KÜS federal headquarters. Therefore, it was crucial that the installation of new solutions and products, such as the migration to the IF-6040 system, could be carried out smoothly without replacing existing hardware. The close, collaborative working relationship and effective cooperation between KÜS DATA and Interflex's service and product development teams has proved to be a key success factor here.

The new KÜS Academy building in Losheim, a modern training and administrative facility with inspection halls and lecture rooms, was also equipped with the latest Interflex technology. The Interflex solution's capabilities are particularly evident here: Each room has individual access authorizations that can be managed at a granular level. The alarm system is linked to access control and automatically locks terminals when activated. This modern infrastructure supports secure and convenient building management. "The new Academy building represents a milestone for us. The detailed access control and integration into our time management system are great advantages for us – both in terms of security and user convenience," emphasizes Thomas Auer, Managing Director of KÜS DATA GmbH.

Personnel scheduling: More flexibility and accountability

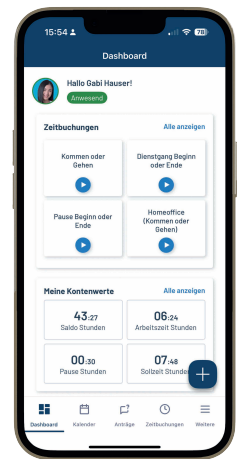

Since 2020, KÜS has used Interflex's personnel scheduling solution to provide employees with an easy, flexible way to organize their work hours, while strengthening the concept of personal responsibility. Through the IF-6040 Employee Self-Service portal, employees can sign up for early or late shifts and manage their work hours, vacation days, and compensatory time off in a transparent way. "In the past, we relied on an Excel spreadsheet. Ultimately, that simply wasn't practical in terms of access and usability," recalls Thomas Auer. "Our experience with personnel scheduling has been very positive. Our company has embraced personnel scheduling because it simplifies many processes and accommodates our employees' individual needs for flexible working hours. As a result, we've been able to significantly increase our appeal as an employer, since flexibility is now a key factor in retaining employees and recruiting skilled professionals."

Integrating time management and personnel scheduling also ensures precise, legally compliant tracking of work hours. Employees can track how many hours they've worked at any time. This promotes fairness and transparency – especially regarding payroll. Another advantage is that employees can see at any time who is in the office, who is working remotely, or who is out in the field on an assignment. At the same time, the software solution reduces much of the administrative workload. With the push of a button, meaningful reports can now be generated quickly and easily, for example to support health management, resource planning, or management decisions.

Customer feedback:

"Our company has embraced personnel scheduling because it simplifies many processes and accommodates our employees' individual needs for flexible working hours."

TeamTime app: Mobile Time Recording as a practical pilot project

Since 2025, KÜS has supplemented its established time management and personnel scheduling solutions with Interflex's native TeamTime app. KÜS was one of the first customers to test the app in real-world use and collaborate closely with Interflex in its development – an example of a partnership where customer feedback directly informs product improvements. Feedback on improving the dashboard user experience and login management, for example, was directly incorporated into optimizing the app, making the check-in process more convenient for users.

The TeamTime app allows KÜS field staff to easily and flexibly record their working hours using their company cell, even when they don't have access to a stationary PC with a VPN connection or a terminal. This is a significant advantage for the company's eight sales staff and inspection engineers who frequently travel and previously had to record their hours on paper or on Excel spreadsheets. "For us, the TeamTime app is a practical add-on," says Thomas Auer. "The ability to log working hours while on the move has significantly increased convenience and eliminated the time-consuming, error-prone task of entering hours retrospectively. This results in more accurate data and reduces the workload for both our employees and the administrative team."

Close collaboration is a key success factor

KÜS and Interflex maintain a close, trust-based partnership that enables them to develop and continuously optimize practical solutions. The feedback gathered also benefits other customers. "As a pilot customer, we have the opportunity to actively contribute and share our experiences," says Thomas Auer. "At heart, we're IT professionals, so we're always interested in innovative solutions and improvements. With personnel scheduling and the TeamTime app, we can offer our employees more flexible working hours. Thanks to reduced administrative work, we can also devote more time to developing new solutions for ourselves and our customers. This is a significant advantage that demonstrates Interflex's commitment to customer satisfaction. This is how solutions are created that truly work in everyday practice."

By combining access control, time management, personnel scheduling, and the new TeamTime mobile app, KÜS benefits from comprehensive, modern solutions that meet the diverse demands of a flexible and digitalized working environment.
